

**Grading presentations
is broken.**

15 min

a professor spends grading a single student presentation.

30

presentations every student gives in a single year.

And the feedback isn't even good.

- **Slow**

Students wait days for a grade they've already forgotten the speech for.

- **Subjective**

Two professors give the same talk two different scores.

- **Vague**

“Good job, work on fluency” — but how, and where?

What if a presentation could grade
itself?

IntellectusAI

Your AI presentation examiner.

Three steps. Seconds, not days.

1

Upload or record

2

AI assesses

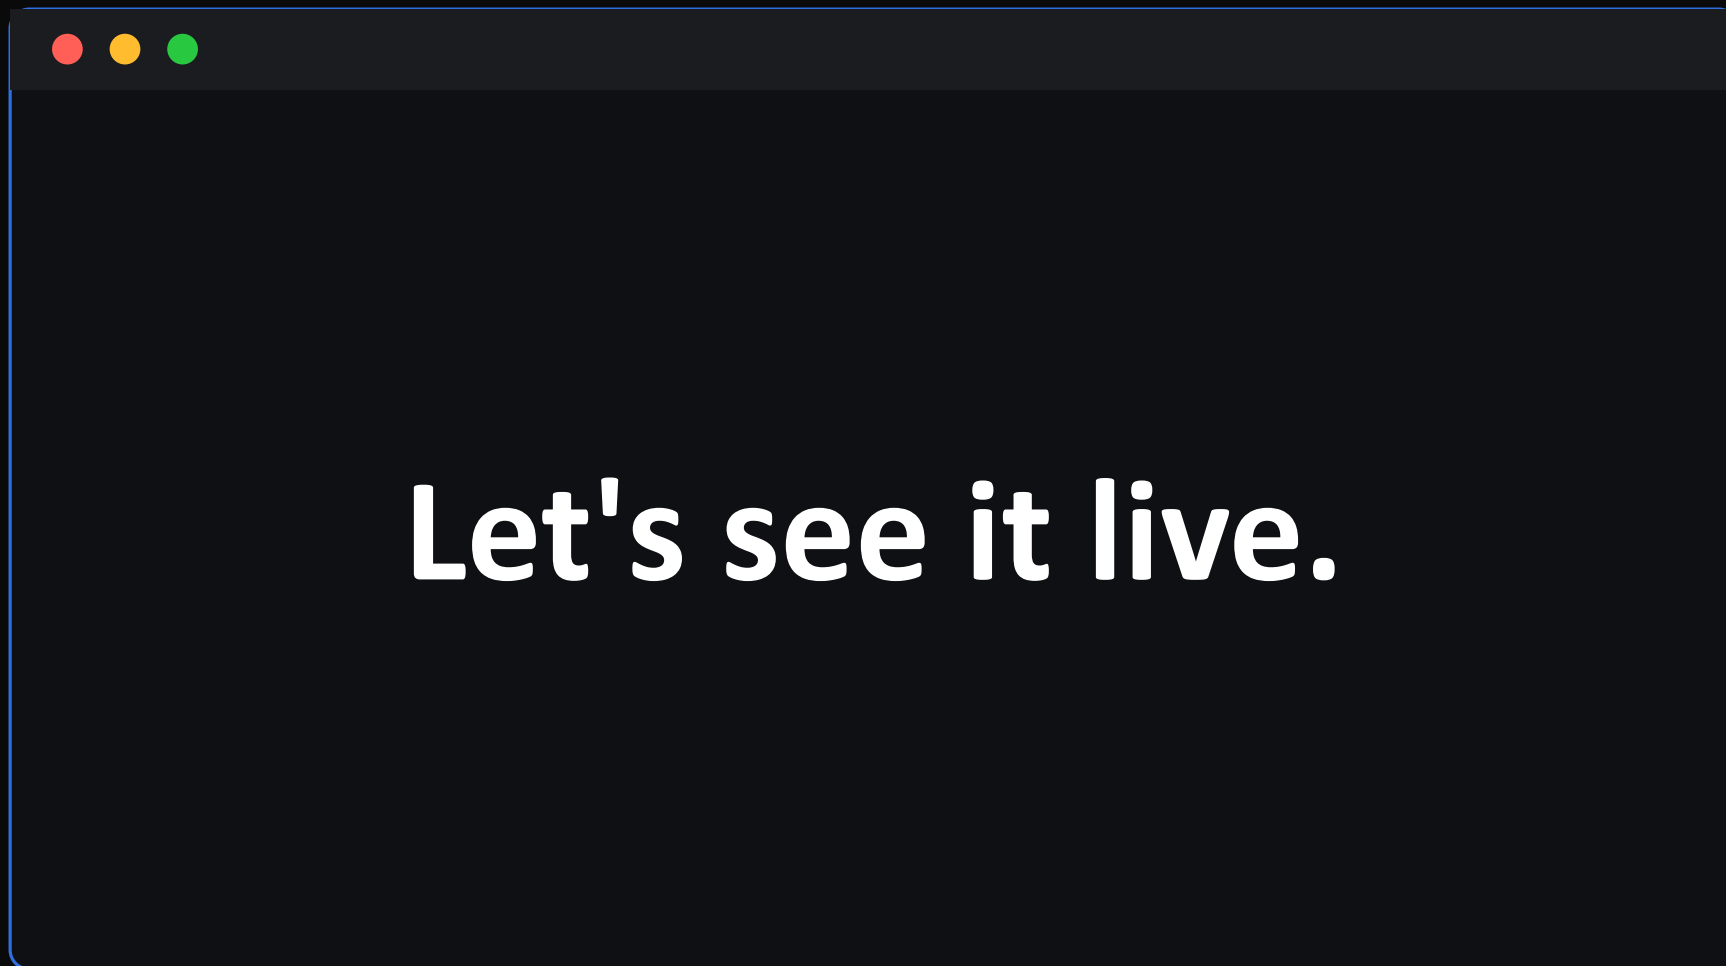

3

Instant report

Every **criterion a real assessment needs —
covered.**

Language, delivery, content and structure — scored together, in one pass.

Let's see it live.

Why it matters.

01

Hours back

Time returned to teaching.

02

One fair standard

Same rubric for every student.

03

Students improve

Instant feedback they can act on.

How do we make money?

~~\$2~~ **\$0.99 / year** — a mandatory subscription, one per student and per professor.

1,000

students

\$990

a year in revenue

7,500 hrs

of grading saved

\$0.99 a year buys back **7.5 hours** of a professor's time — per student. The math sells itself.

Every account verified with Google.

Confirmed the moment they sign in with their university Gmail — no biometric hardware, no per-scan fees.

@ One sign-in. Every role.
